GRUPO AGEX

AGRAGEX, a non-profit association, currently brings together 105 member companies across Spain, accounting for nearly 70% of Spanish exports in the agricultural and livestock sector.

Since its creation, AGRAGEX has worked with a clear objective: to promote the internationalization of the Spanish agrilivestock sector and position our companies as global benchmarks in technology, innovation and industrial capacity.

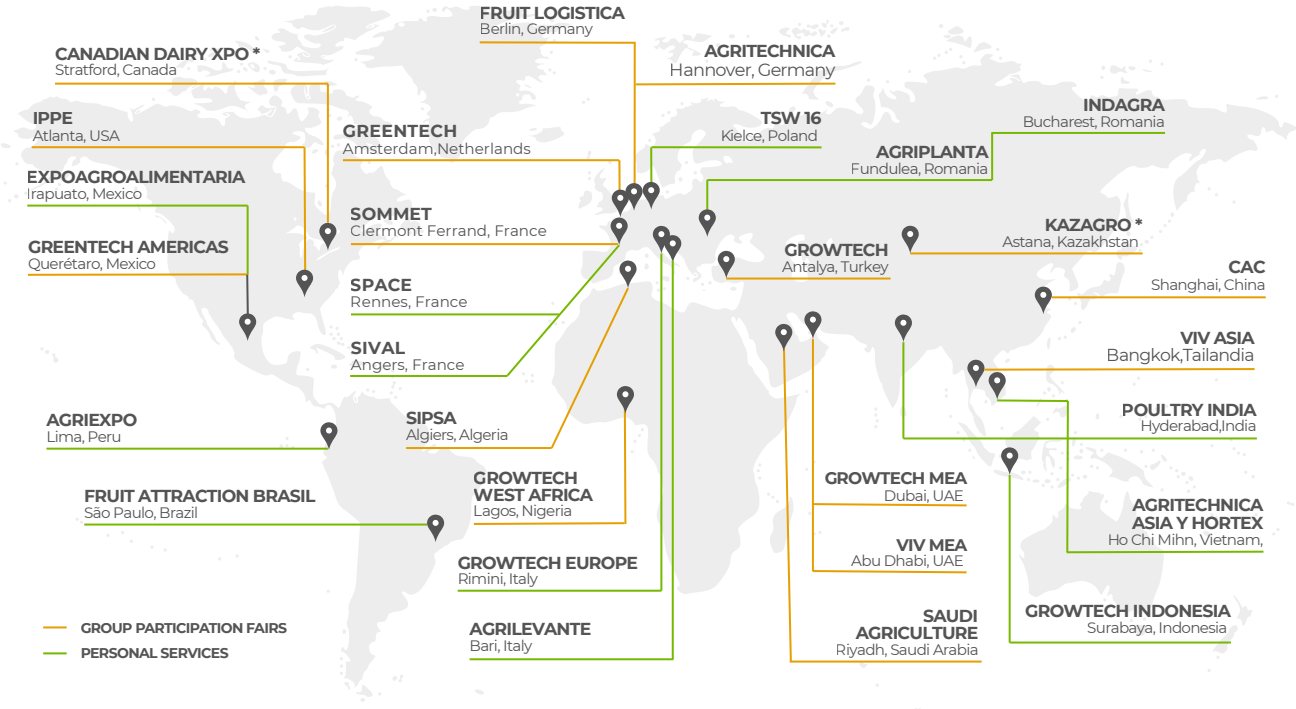

To achieve these goals, AGRAGEX carries out a wide range of international promotion activities, including:

- Direct Trade Missions.
- Group Participation in the main International Trade Fairs.
- Organization of Foreign Buyer Delegations.
- Preparation of statistical studies and market analyses.
- Turnkey customized services.
- Channeling of international inquiries and business opportunities.
- Communication and promotional actions in specialized media, mailings, catalogs and digital platforms .

- Agricultural Machinery
- Components
- Irrigation
- Greenhouses, Plant Health and Nutrition
- Support and Storage
- Livestock Equipment
- Animal Health and Nutrition

SPAG Group specializes in the design, manufacture, and distribution of agricultural protection systems against hail and frost. With more than 50 years of experience, the company develops proprietary technological solutions, including anti-hail systems and frost protection towers, to help safeguard crops from adverse weather conditions.

In addition to its products, SPAG provides technical support, real-time monitoring through its SPAGNET application, and environmentally sustainable solutions that incorporate renewable energy technologies and promote eco-friendly agricultural practices.

SECTORS

Battery-powered trimmers

Having joined the Sanz Group in 1999, Agroplastic is the Group company devoted to the manufacture of injection-moulded plastic parts.

In engineering, injection molding is a semi-continuous process that consists of injecting a polymer, ceramic or a metal in a molten (or hollowed) state into a mold closed under pressure and cold, through a small hole called a gate. In that mold the material solidifies, beginning to crystallize in semicrystalline polymers. The final part or part is obtained by opening the mold and removing the molded part from the cavity.
